### **Rescue Collar System**

The PetSafe Micro I.D.<sup>™</sup> Rescue Collar can be worn as an everyday dog or cat collar, but its built-in USB flash drive stores all of the pet's personal data. If the pet becomes lost, the flash drive can be plugged into any computer with a USB port to identify the pet.

The flash drive stores a profile that can include the pet owner's home, work and cell phone numbers, veterinary records with any medical concerns, pet personality and even pet photos. It can be updated easily, even for temporary addresses like a hotel during vacation. The collar also features a toll-free number connecting callers to the optional PetSafe Rescue Service. The collar is the winning pet product idea from PetSafe's IdeaFetch<sup>™</sup> 2006 invention contest.
