

## Patio Panel Recessed and Exposed Doorframe

**Recessed Door:** A recessed frame is flush with or barely visible in the interior or exterior wall. You can't see the track the door slides into. If you have a recessed door, you will need a [Patio Panel Kit](#) (not included) to install your pet door. (See below for written instructions of Kit)

**Exposed Door:** An exposed door frame is visible and exposed in the interior and exterior Wall. You can see the track the door slides into. This allows you to screw your pet panel into the side of frame for stability.

Use the L brackets for measuring and marking purposes

\*\*\* **Item # MAP00-12891** – Bracket Kit - Sold separately to be used at top and bottom of the sliding glass frame to install the patio panel

Slide the patio panel door against the sliding door jamb – measure and mark the top center and bottom center of the patio panel door – then mark on sliding door frame - use pencil or something that can be cleaned away – these marks are a marking guide only for the 2 metal brackets

If you have a LG tall patio panel - mark on the bottom of the door frame where the bracket meets the edge of patio panel

Slide panel over and up to be able to place brackets into the track of sliding glass door

Take one of the metal brackets and place at the top of the sliding glass track where the hanging –down part of the bracket aligns with your mark. Mark with a pencil on the inside of the track for your pilot holes and do the same for the bottom track. \*\*\* The metal brackets are universal and will work in the top or bottom track \*\*\*\*

For a LG tall patio panel, use the edge of the metal bracket to align with the mark at the bottom

Use a 7/64 inch drill bit to drill pilot holes for metal brackets at the top and bottom of the patio panel door

Place the metal brackets back into place and, with the screws provided, secure the metal brackets in the top and the bottom of your sliding glass door track

Slide your patio panel back against the door jamb and you will see the metal brackets in front of your Small, medium or large patio panel. For LG tall, the bracket will line up at the edge of the patio panel

Now use a 7/64 inch drill bit to drill pilot holes through metal brackets and into the patio panel at the top and bottom. Attach the brackets with the screws provided.
